### About the Preflight Profile

In order to help contributors ensure that their InDesign templates are ready to be submitted, the Adobe Stock Templates team has created a preflight profile for InDesign.

This preflight profile will help you check your InDesign file for style overrides, overset text, and more before you submit your files to Stock.

For more information on InDesign preflight profiles, visit [Adobe HelpX: Preflight files before handoff](#).

### Download the Preflight Profile

The Adobe Stock Templates Preflight profile can be downloaded from the [Contributor Starter Resources](#) page, under Tools & Scripts.

### Loading the Preflight Profile

1. In InDesign, open the Preflight panel (Window > Output > Preflight)
2. From the Preflight panel, click the flyout menu icon and select Define Profiles... to open the Preflight Profiles menu
3. Click the Preflight profile menu button (≡, below the list of currently loaded profiles), and choose Load Profile...
4. Select the "Adobe Templates Preflight 10-19.idpp" file and click Open
5. Close the Preflight Profiles menu
6. From the bottom ribbon menu (see third screenshot below), click on the current Preflight Profile name, and select Adobe Templates Preflight 10-19 from the list
7. InDesign will now use Adobe Templates Preflight 10-19 to check for preflight errors

### Using the Style Override Highlighter

While the Preflight will identify text with a style override, it cannot pick out overrides for text without an assigned paragraph or character style.

The Style Override Highlighter tool is able to detect overrides for text that does not have a user-defined style assigned to it (eg 'Basic Paragraph' or 'None'). When enabled, this text will be highlighted.

Highlight colors may vary, depending on user workspace setup and default settings.

The Style Override Highlighter toggle, in the magenta box above

### Using the Style Override Highlighter

While the Preflight will identify text with a style override, it cannot pick out overrides for text without an assigned paragraph or character style.

### Tips

- Clicking the page number next to any error will make the document “jump” to the error
- On many errors, the Info turn down will provide more details on how to make corrections
